

DEEP LINKING TO GLOBALWEB SEARCH RESULTS

If the user has not selected a specific hotel, third party sites can link directly into Global Web's search results. Parameters can be passed into search to default the results to a particular set of hotels.

Example URL:

http://doubletree3.hilton.com/en_US/dt/search/findhotels/extSearch.htm?city=Memphis&state=TN&country=US&arrival=20141201&departure=20141203

Below is the URL format that a vendor can use to send the customer to the Search Results page with the look and feel of a specific Hilton Worldwide brand. The results page behaves in the same manner as it does today on the website, i.e. showing hotels within a certain radius of city center, sorted by distance.

The list will have availability and rates only if dates are provided in the URL. The customer will have full benefit of current Global Web functionality. He/she can choose to book a room or change the search parameters on the left nav and search again.

URL String Parameters

The URL string format to link into **search results** is as follows:

[http://\[domain_name\].hilton.com/\[locale\]/\[brand_id\]/search/findhotels/extSearch.htm?\[parameter1\]&\[parameter2\]&\[parameter3\]](http://[domain_name].hilton.com/[locale]/[brand_id]/search/findhotels/extSearch.htm?[parameter1]&[parameter2]&[parameter3])

To link into the “**Search Zero**” search form and pass parameters into this form, use:

[http:/// \[domain_name\].hilton.com/\[locale\]/\[brand_id\]/search/findhotels/index.htm?\[parameter1\]&\[parameter2\]&\[parameter3\]](http:/// [domain_name].hilton.com/[locale]/[brand_id]/search/findhotels/index.htm?[parameter1]&[parameter2]&[parameter3])

This string should be appended appropriately with parameters from the tables below.
